

# WASTE SORTING SYSTEM

## from Groundwork Experts

## Features and benefits of the Waste Sorting System

Groundwork's Waste Sorting System applies to all kinds of material, including cable, plastics and different type of garbage.

Advanced technologies are used to size grading, magnetic separation, eddy-current separation, pneumatic separation, photoelectric sorting and bouncing separation has able us to provide complete technological design of sorting system.

The Waste Sorting System with the complete set of devices as well as electrical control integration service maximizes the technologies to sort and reclamation various components of urban household waste in turn saving cost and landfill volumes.
